

No laser detection

May be caused by malfunction of laser device

Check the functionality of laser:

Never point directly into your or other people's eyes.

- Red laser by pointing to a wall or other safe surface,
- IR laser by pointing to a running cellphone's camera - small flashes appear.

When the laser doesn't function - try changing batteries. If it doesn't help, contact the producer of the laser device for repair.

When the laser functions properly - see camera settings for help.
